

Position: Artificial Intelligence / Machine Learning Engineer

- Einsatzort: Hamburg, Frankfurt or Munich
- Arbeitszeit: fulltime
- Vertragsart: permanent
- Starttermin: 2017-10-01

Your Tasks:

- We are looking for an artificial intelligence / machine learning engineer for a development team working with platforms, services, prototypes and products. You are participating in development, implementation and testing by utilizing artificial intelligence.
- The work results are developed in multinational collaboration and are mainly determined for customer service, e-commerce/e-sales and for smart products. It is also your tasks to evaluate technical feasibility, added value and profitability, together with other experts, and to participate in continuous improvements.

Your Profil:

- university degree in business informatics, computer science, mathematics or industrial engineering and management
- relevant working experience in handling big data and artificial intelligence, neural networks, machine/deep learning
- outstanding knowledge in Tensorflow, scala, Python, Hadoop, MATLAB and/or R, same as in mathematics / stochastics
- Experience in developing code ready for production (e.g. statistical modelling, machine learning algorithms, data pipelines) and in data science projects, application of open source technologies (e.g. Hadoop, Spark, Hive, Kafka, Storm)
- Experience in agile working methods, creativity in solution finding, knowledge in implementation of new technologies, products and services
- enthusiasm, entrepreneurial thinking and high degree of autonomy, paralleled with team work orientation, analytical and conceptional abilities
